

ClaroRead Standard 2007 UK

ClaroRead has been developed to help PC users of all capabilities create, read, view and check text. The software is closely integrated with Microsoft™ applications, with particular emphasis on Microsoft Word®.

Make your PC Speak with a Human Voice

ClaroRead speaks back text as it is typed, allowing a student to check and proof-read their work quickly and easily. Text can be spoken at any point by highlighting individual sections of text and pressing Play - great for proofreading.

Close integration with Microsoft Word 2003 and 2007, and Internet Explorer 6 and 7 means you can click and play at any point in a document or web page.

A choice of male (RealSpeak Daniel) and female (Emily and Jane) human-sounding voices give clarity and dispense with the robotic quality of most computer voices.

Spoken words can be tracked using a custom colour selection. Any accessible text under the mouse can be spoken if needed.

Make Audio files from text documents for listening to on your PC or a portable audio player. Simply Select and Save - great for revision or listening on the move. Audio quality has been further improved for 2007.

A Text to Speech Pronunciation Dictionary is available to modify the way words are pronounced if needed.

Integration with Microsoft Word 2003 & 2007

ClaroRead provides a single tool bar for use in Microsoft Word that combines a homophone and tricky word dictionary, font and spacing commands, a thesaurus , spell checker button and a save to audio function. All have clear graphic icons for ease of recognition.

Font and Colour Changing

When working in Microsoft Word, ClaroRead's Font Button allows you to modify the font size, type, and colour of the whole document very easily.

You can:

- Increase or decrease the font size.
- Change the font to one of 3 popular fonts with one click. The fonts can be chosen in the new ClaroRead Advanced Settings Editor.
- Change the colour of the text of a whole document and change the background colour of your PC easily

Spacing

Text character, line and paragraph spacing using Microsoft Word menus requires some detailed knowledge. ClaroRead makes it simple to space out text, both in Word and on web pages using Internet Explorer 6 or 7. Pressing the Spacing Button when working in Word or Internet Explorer will help you:

- Expand spacing.
- Change line spacing.
- Changes the number of points (spaces) after the end of each paragraph.

Homophones and Tricky Words - Helping Choose the word

Homophones are words that are pronounced alike even if they differ in spelling or meaning, such as “pair” and “pear”.

ClaroRead Homophone features will:

- Mark in colour all the homophones and confusable words in a document. Using the new Advanced Settings Editor, you can also add additional tricky and confusable words.
- The Check Feature will list alternative words that sound the same, along with the meaning of each word.
- Mark homophones in colour as you type.

Check Word - a single button press

ClaroRead provides a single Check Button for use in Microsoft Word that combines a homophone dictionary, thesaurus, reference dictionary and spellchecker, making the checking of your text and documents easier and more comprehensive.

If a word is a homophone the Homophone Check Box will appear, along with meanings. If the word has alternative words with the same or similar meaning, the Meaning Check Box will appear. You can then drill down further to see the dictionary definition. You can SpellCheck individual words or the whole of your document at any point.

The Check Boxes are fully speech enabled, so hovering the mouse over the words will make them speak. We also have over 1000 picture icons to help with word meanings.

Word Prediction

ClaroRead contains a word prediction feature, enhanced in the 2007 version, which can be useful for certain computer users. ClaroRead uses a base prediction dictionary consisting of the most frequently used words in the English language. The dictionary learns as you type, and rejects words that don't pass the automatic spellcheck.

The Prediction List will automatically appear by your cursor during typing. Alternatively, you can dock the Prediction windows anywhere on the screen to use it as a reference.

The ClaroRead Advanced Settings Editor now allows the creation of multiple Prediction Dictionaries, by importing words from existing documents. Ideal for creating subject and curriculum specific dictionaries, it puts the tool into the hands of the teacher.

Talking Calculator

ClaroRead adds a voice to the Windows Calculator. Enter the sum with the numeric keyboard and the figures will be echoed back to you.

The buttons on a standard and scientific calculator can also be spoken, providing the speech settings are enabled. In addition, figures from Microsoft Excel can be spoken when using the cursor keys to move around.

System Requirements

Windows Vista, XP, 2000

Sound Card

512 MB RAM or more is recommended.

250MB Hard Disk Space Maximum Required.

Scanner Supporting TWAIN or WIA Drivers required for Scan2Text scan from paper.
